Product description:

Wide stairs enable the assistant and the disabled to ascend together and glide down the slide channel, if desired. The tread depth has been increased so that you can stand on stairs with both feet. The handrails and panels of stairways are a bit higher than for our standard products. For people with visual disability, we have painted the vertical surfaces, the first step, and one platform board darker (to create a contrasting effect).

Children in wheelchair can independently develop their hand motor skills by moving the ring from one end to the other without touching the tube.
